To Whom It May Concern

Subject: Global Peace Through The Global University System (GUS); and Palestinian E-learning and e-healthcare/telemedicine

Global University System (GUS) aims to build a higher level of humanity with mutual understanding across national and cultural boundaries for global peace. The GUS is a worldwide initiative to create advanced telecom infrastructure for accessing educational resources around the world.

The aim is to achieve "education and healthcare for all," anywhere, anytime and at any pace for the Palestinian People.

The mission of GUS is to help higher educational and healthcare
institutions in remote/rural areas of developing countries (example, the Palestinian People) to deploy broadband Internet in order to close the digital divide. Learners may take courses from different member universities, obtaining their degree from the GUS, thus freeing them from being confined to one academic culture of a single university or country.

These institutions also act as the knowledge center of their community for the eradication of poverty and isolation. Those institutions affiliated with GUS become members of the GUS/UNESCO/UNITWIN Networking Chair Program located in Finland. We envision interlinking those members through broadband Private Virtual Network to conduct mega-videoconferences as well as related research project, "Globally Collaborative Environmental Peace Gaming (GCEPG)."

The Palestinian People possible creation of GUS/Palestine/Gaza Strip and Peace Gaming Initiative. Please see http://tinyurl.com/25kl5n

The GCEPG is a computerized gaming/simulation with a globally distributed computer simulation system to help decision makers construct a globally distributed decision-support system for positive sum/win-win alternatives to conflict and war.

The idea involves interconnecting experts in many countries via the global Internet to collaborate in the discovering of new solutions for world crises like ours in Gaza/West Bank, such as the deteriorating ecology of our globe, and to explore new alternatives for a world order capable of addressing the problems and opportunities of an interdependent globe.

Our projects focus on the content delivery through broadband Internet (satellite, terrestrial, wireless, etc.) for eradication of poverty and isolation in remote/rural areas of developing countries, like ours the Palestinian territory, particularly on the intercultural mutual understanding for attaining global peace.

This is to construct information and knowledge societies, and to bridge the knowledge and digital gap that exists between developed and developing countries, as promoting free exchange of ideas and knowledge; to maintain, increase and disseminate knowledge through our work in education, the sciences, culture and communication.

As an extension of our GCEPG project, we will foster creativity of youngsters around the world. Researchers in developing countries can co-work with colleagues in advanced countries to perform joint collaborative research with use of virtual laboratories for experiential/constructive learning and creation of knowledge through the global GRID technology, thus forming Globally Collaborative Innovation Network (GCIN).
