Subject: Letter of Support for Global Early Warning Systems (GEWS) with Cloud Computing Technology Grant Application

Dear Tak

Since we met the first time at the UNU lecture of Dr Bourguignon on the topic of the Global Financial Crisis and you introduced me to the concept of the Global University System/Peace Gaming Energy modeling basic principles introduced by the Global System Analysis and Simulation Association (GLOSAS) founded under your leadership, I have been seduced and highly impressed by the GEWS proposal and the breadth and soundness of the concept of the creation and sharing of worldwide models in various areas such economy, environment, culture and society and linking them to forecast possible future development scenarios by the use of simulations. Such gaming simulations will provide powerful tools to assist developing countries in their strategic planning to foresee possible scenarios that might develop to avoid the pitfalls of the worse ones and highlight the long term impact.

This would provide leaders, politicians, decision makers, economists and diplomats valuable tools to foresee the future, provide long term forecast to management and governance, build a foundation for future globalized economy, minimize friction and avoid conflicts and promote world peace.

In this era of continued globalization, the sharing of knowledge and the creation of simulation models calibrated at the worldwide platform is desperately needed to promote knowledge global exchange, sustainability development principles, prosperity and peace on earth.

Your dedication to this concept throughout the years is a testament to its soundness and resilience and to your tireless commitment to advancing the state of the art of global knowledge, development and world peace.

Therefore, I am proud and pleased to confirm our full support to the GEWS project.

Best Regards

A. Benslimane, Ph.D
