**Re: Participation in the SEE project**

We have learned about the Simulation Exploration Experience (SEE) involving the National Aeronautics and Space Administration (NASA), simulation industry and academia. Its mission is to "champion, challenge and create collegiate level modeling and simulation education". The overarching goal is enhanced employability through experiential education advancing technical and professional skills with the SEE inter-university international team working together in a simulated mission on the far-side of the Moon and beyond. We would like to seek the participation of the University of Ouagadougou to this project.

We hope that collaboration will foster a fruitful relationship among NASA KSC, the larger worldwide simulation community and the University of Ouagadougou.

Sincerely yours,

  
**Idrissa M. OUEDRAOGO**  
Professor of Economics
