poor connectivity, leading to bad communication and the large gap of digital divide causing slow and hardeous progress exacty why we need such project to be successful.

– we are to make it to be successful as improving the line speed – for example, as combining "Africa Coast to Europe (ACE)" ultra high speed (5 tera bps) optical fiber submarine cable along the west coast of Africa with GLORIAD broadband Internet as mentioned elsewhere before – noted by Tak Utsumi on 4/22/13.

What kind of software is supporting the Threshold 21 model. Can you confirm you are using open access models and software

This is to be answered by Hans Herren <hh@millennium-institute.org> to Dorothy Gordon <dorothyg@aiti-kace.com.gh>.

John Mack

12:06 PM

For energy sector planning, perhaps we should put more emphasis on distributive systems instead of one national grid. Perhaps your model can incorporate the work of other models that look at mini and micro grid planning using renewable energy. One such model is the HOMER model: www.homerenergy.com

Many thanks for your valuable suggestion – this is certainly a strong candidate for our GEWS project – noted by Tak Utsumi on 4/22/13.

dorothy 2

12:10 PM

Please share with us the study on the implementation of the tool and the projection of the 11% saving. Is there a link to study that?

I totally agree with you point on a systems model of agriculture and we need to highlight the diffrentials with energy input and output in agriculture.

12:10 PM

muhammadou

12:11 PM

Dorothy, the last time I taught Systems Dynamic Modeling I used a tool call VENSIM. It came with the book I used.

Am sure Open Source Tools do exist.

12:11 PM

Perhaps Hans can share the tool he uses

John Mack

12:40 PM

Tak - the ITU says broadband is as important as energy, water and sanitation in today's economies.

Good to hear about this – noted by Tak Utsumi on 4/22/13.

Michael C. Attipoe

12:43 PM

Can I obtain copies of the presentaton slides?

Yes, I will upload them in my list – noted by Tak Utsumi on 4/22/13.

John Mack

12:46 PM

Hans, in Africa endoginous variable are important but exogenous variables can have an enormous impact. For example, the lack of an African coast guard opens the continent to massive theft of its fish (food security), as well as poaching of tropical timbers, dumping of hazardous substances, etc. How does T21 incorporate such forces?

hans Herren

12:53 PM

the model is very flexible and can integrate most elements that are of relevance for a country. happy to exchange more via e-mail, also with re the other questions posed above...hh@millennium-institute.org
