Dear. Dr. Fouad M. EL-Harazin

I would like to say that I'm very interested in this project, not only because, it's personally directly involve and, also desire in my study and applying WiMAX, but also for it's being a compatible system that goes beyond the restrictions of the geographical borders.

Actually I believe that such system could prepare for a real civilized interoperable world; in case it was correctly managed and well declared. Connected Experiences, is a suitable title for our project that includes many educational, healthcare, commercial and humanity services.

WiMAX is an optimal solution that can meet all the above needs and more, it's already a standardized technology that can be trusted, flexibly customized according to the nature and demands of each application.

I strongly support this ambitious project and, I would exert every possible effort for achieving its goal of enriching the scientific research in Palestine, Gaza Strip and West Bank to improve the educational and technical levels.

Sincerely,

Eng. Mohammed T. Dawood
