Dear Dr. Fouad M. EL-Harazin, President  
Gaza International Foundation for Peace on Earth  
Director of International Programs of National Research Center  
Gaza Strip, Palestinian Authority

Dear Dr EL-Harazin,

I read carefully the documents you sent me by the e-mail some days ago. In fact, your proposed work has high importance to Palestinian society. Linking the Ministries of Health, Education & Higher Education and the Communication and Information Technology (IT) using the internet technology is highly required to improve the health and education services in the Palestinian territories, and the other fields will be affected by this improvement.

I think the first step is to build the IT architecture (the blueprints) carefully taking into account the coordination of all stakeholders from health, education and IT specialists and depending in today's available components, then building the infrastructure which is the implementation of the IT architecture.

I am pleased to tell you that I support your work, since my interest is in information systems and e-learning systems.

Please don't hesitate to tell me what your next step is.

All the best
